

Website security with Deflect

Layer 7 protection, DDoS defense, malicious botnet mitigation, enhanced by AI

Deflect services ensure websites are optimized for speed while remaining resilient to attacks. We've built our technology stack defending high-profile human rights and independent news groups. Now, we bring our experience and time-tested infrastructure to companies looking to invest in rock solid DDoS mitigation and secure web hosting.

\$ 0.002

Mitigating bots with Baskerville

AI guardian on site, WAF WAF!

Baskerville is a security analytics engine that ingests web logs and provides predictions on IP behavior. It uses machine learning (anomaly detection) to distinguish between normal and abnormal traffic. Subscribe to Deflect's clearinghouse for predictions or deploy the open source framework on-premise.

99.95%
